

Call for Papers

“Emerging Practice” in Respiratory Therapy

The Canadian Journal of Respiratory Therapy (CJRT) is a quarterly, peer reviewed, open access publication. Our goal is to generate evidence and discussion to support more effective and equitable access to respiratory therapy and care for patients in Canada and around the world. >> [View Guide for Authors](#)

The focus of this special issue on the topic of **Emerging Practice** will be the role new and innovative cardiopulmonary practices play in expanding coverage, improving quality, and containing costs in healthcare.

Our goal is to present research findings, reports on innovative projects related to emerging practice, case studies, and editorial/opinion columns that will inform respiratory therapists and members of the healthcare team on the role of RTs in emerging practice. We are also interested in papers with an international focus that cover emerging practice topics worldwide.

We invite respiratory therapists, as well as our interprofessional colleagues to submit papers on the topic of Emerging Practice, which may:

- ➡ Focus on unique, emerging, and expanding roles of respiratory care practitioners in health care environments
- ➡ Demonstrate interventions that are new, innovative, promising, and safe, yet have limited discussion in the literature
- ➡ Respond to changing and evolving healthcare needs, including responses to an ageing population, healthcare worker shortages, or advancing models of care such as precision medicine

Submissions are due by **May 1, 2019**, through the CJRT website:
<https://www.cjrt.ca/>.
