

## Call for Papers 2022

We welcome submissions from RTs on the topics below. In addition to research papers, the CJRT welcomes Letters to the Editor, Commentaries, or Editorials as a quick way of sharing information with your fellow healthcare professionals. Check out our “Innovations in Practice” article format in the [Author Guidelines](#) - these are a great way of sharing process/protocol improvement, program evaluation, quality improvement, or practice change in your department.

**Manuscript Submission site:** <http://cjrtmanuscript.com>

**Please contact the Managing Editor with any pre-submission inquiries:** [editor@csrt.com](mailto:editor@csrt.com)

**COVID-19 Long Haulers:** We are calling for submissions regarding patients with long-term post-COVID symptoms known as COVID-19 Long Haulers. Submissions could describe patient perspectives (case reports), prevalence, pulmonary rehabilitation strategies, or management strategies, for example.

**System Impacts of COVID:** How has RT practice changed since COVID? What innovative new methods has your department used (ways to prone, for example)? How has communication and information sharing between departments evolved?

**Burnout:** The National Academy of Medicine recently defined Burnout as “a syndrome characterized by high emotional exhaustion, high depersonalization (i.e., cynicism), and a low sense of personal accomplishment from work [1].” We know burnout continues to be a serious issue, and we want to hear from RTs. What are the methods of clinical documentation in the workplace, for example? What supports are available and what impacts have these had on measuring, mitigating or addressing burnout?

1. National Academies of Sciences, Engineering, and Medicine. Taking Action Against Clinician Burnout: A Systems Approach to Professional Well-Being. Washington, DC: The National Academies Press. 2019. <https://doi.org/10.17226/25521>.

**Climate Change:** We are calling for submissions that highlight the effect of climate change on our profession that can be shared with our readership and the general public. In 2021, the CJRT simultaneously published [Call for emergency action to limit global temperature increases, restore biodiversity, and protect health](#), along with hundreds of other health-related journals across the world. This is an issue that affects our patients directly. Climate change is worsening air quality, and this has a direct impact on such conditions such as asthma and COPD.
